Don – I have already discussed with Paul and it will be added to our-list for this fiscal year (starting 1 July 2013). I will be the PM.

Paul – before I formally add it to the list I need to know if we should do a PA with the existing site name and CERCLIS # or start a new site as 5755 South Hoover Road.

Randy – Just following up from our conversation last week regarding a carbon tet source in Wichita. Occidental Chemical Corp (formerly Vulcan – 6200 S. Ridge Rd) is one of our corrective action sites – Brad R. is our project manager. They were in the office recently providing an update to Brad and KDHE project mgr – Everett, and they've indicated they identified a carbon tet source – see attached slides.

We've got in CERCLIS the DeBruce Grain Elevator Explosion – KSN000706409 – 5755 S. Hoover Rd. The only superfund activity was an emergency removal back in 98 when we were requested to provide air monitoring support during the recovery efforts. The elevator is in RCRAInfo as Garvey Warehouse with # KSP000002020.

Paul R and I discussed the site this morning – we're in agreement that the KDHE pre-remedial program would be the best avenue to assess the carbon tet source.

Thanks,

Don, I'm not sure if you've received this copy of the slides suggesting the existence of an off-site, grain elevator source of carbon tet in Wichita, so I'm forwarding it as you requested.

Jeff

Gentlemen, Please delete the previous version from Bruce that we got last week. This is a replacement. Thanks. Brad

Hi Brad:

Per our discussion earlier today, please see the attached relevant slides from last week's meeting.

As always, please don't hesitate to contact me or Juan if you need anything further.

Best,

Bruce C.
